

TRANSJET® – a Swiss precision product for sublimation printing

TRANSJET® ensures excellent quality results in sublimation printing; the highest cost efficiency and consistent reliability. TRANSJET® papers are designed for maximum, consistent colour transfer with minimum ink consumption. They are also designed to be universal, so are suitable for use with all common printing systems available on the market and with a wide range of inks.

To enable you to make optimal use of the potential of the latest generations of printers and inks, we are always working to improve and further develop our TRANSJET® sublimation papers. See for yourself and you will be convinced by the performance and reliability of TRANSJET® with regard to colour transfer, line sharpness and runnability.

Cham Paper Group supports you professionally and as a partner

- Personal guidance for efficient use of TRANSJET® from the introductory solution through to the fully automatic mass production.
- Competent colour management support with our application engineers.
- Higher flexibility thanks to effective logistics solutions.

TRANSJET® papers are truly sustainable printing media, PE-free, containing 100% recyclable pulp and produced in FSC quality. Thanks to our inhouse converting facility we are able to serve our clients' needs with custom-sized mill and plotter rolls.

Outstanding performance thanks to the best quality characteristics

Standard

High colour brilliance

Lower ink consumption

Perfect flatness

Intense black

Smooth colour gradient

Special Features

Fast paper-drying

Tack effect

Shorter transfer times

Reduced transfer temperature

No folds or corrugation (wet cockling)

TRANSJET® product portfolio

		Standard Features	Special Features
Innovation: TRANSJET® Fashion 8330 Ultra light	45 g/m²	1060 LOGO I	
TRANSJET® Classic 8310 Value for money	75 / 100 g/m²	1060 LOGO	
TRANSJET® Boost 8340 Best in class drying	70/85/130 g/m²	1060 LOGO	1
TRANSJET® Sportsline 9310 Tacky	100 g/m²	1060 LOGO	Q
TRANSJET® Sportsline High Tack 9400 Enhanced tack effect	100 g/m²	LOGO I	•

XXL rolls available up to 3.20 m.

ATTENTION

Please note that ③ ⑤ and ⑥ result both in excellent, identical transfer quality. The category ⑥ ⑥ describes a general preference for this paper grade / weight. All TRANSJET® papers should be kept in the original packaging when transported and stored. The ideal print room climate is 23°C / 73°F and 40–45% relative humidity.

TRANSJET® makes the difference – in quality, efficiency and reliability.

- Consistent product quality
- Observance of agreed delivery
- Special formats and extra-large

1. MORE QUALITY

Excellent colour brilliance

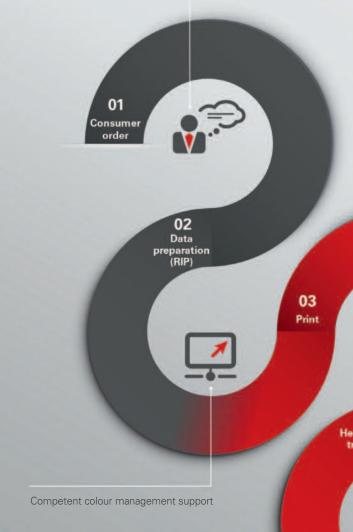

The special coatings hold the ink on the paper's surface. This increases the transfer rate and ensures brilliant homogeneous colours.

Consistent quality characteristics

The performance and dependability of TRANSJET® with regard to colour transfer and runnability ensures added reliability to all of the print service provider's processes.

Precise transfer results

TRANSJET® offers a solution which completely prevents «ghosting», a kind of shadowing, because the sublimation paper bonds with the textile during transfer. This guarantees homogeneous colour transitions and high line sharpness on the textile.

2. MORE EFFICIENCY

Shorter production times

TRANSJET® is designed for the latest generation of printers. The good drying properties of this sublimation paper allow faster print production and shorter transfer times. This reduces costs and saves time.

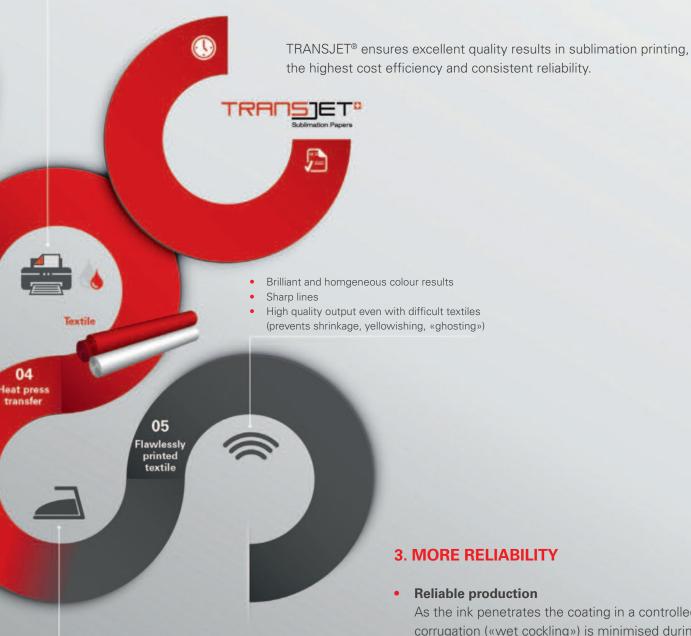

Lower ink consumption

As TRANSJET® holds the ink on the surface, ink consumption can be minimised without any need to sacrifice colour brilliance.

Ideal for extra-wide formats

Due to the papers' high stability, your extra-wide production of up to 3.20 m runs reliably and efficiently.

- Lower ink consumption
- Fast ink-drying to maximize print speed
- Less waste and reduced downtime

- Shorter transfer times
- Reduced transfer temperature for heat-sensitive fabrics
- fewer rejects

3. MORE RELIABILITY

Reliable production

As the ink penetrates the coating in a controlled manner, corrugation («wet cockling») is minimised during printing. This reduces both downtime and repair costs.

Fewer rejects

Due to the activated tack effect of TRANSJET® Sportsline triggered by the heat in the calender, there is now hardly any shrinkage of textiles during processing.

Secure margins

Quality fluctuations or reprints due to non-compliance with stipulated print qualities, along with high additional costs which reduce margins are avoided.

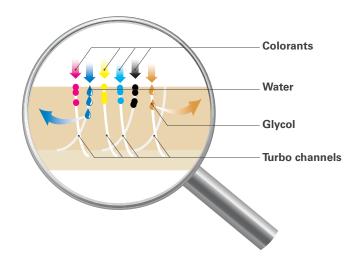

TRANSJET® – the most innovative dye sub papers in coating technology

New TRANSJET® Boost, instant-dry @ 350 m²/h for use in industrial high-speed printers

- Best ink-drying ever seen
- High ink loads possible
- Brilliant colours
- Extra large gamut
- Excellent transfer rates

TRANSJET® Boost has been developed in close cooperation with leading printer and ink manufacturers to achieve maximum efficiency in sublimation printing. Thanks to its outstanding drying capacity it is ideally suited for use on industrial high-speed printing machines as e.g. MS Italy, Reggiani Macchine, Robustelli, DGI.

With TRANSJET® Boost, the ink is instantly absorbed by the highly porous coating surface and passed through capillary tubes into the coating. During the transfer process, the capillary tubes act as a turbo channel, speeding up the colour transfer by boosting the colorants out of the coating.

LATEST INNOVATION: TRANSJET® Fashion 45 g/m²

The ultra-light grammage of this coated sublimation paper guarantees extreme cost efficiency in high volume productions as they are usual e.g. in the garment manufacturing industry. With its grammage of only 45 g/m², TRANSJET® Fashion delivers the same high colour transfer rate as any other TRANSJET® paper.

To maximise print efficiency, TRANSJET® Fashion features excellent ink-drying properties. Suitable for use on industrial high-speed printing machines as e.g. MS Italy and Reggiani Macchine.
